

Good day!

As residents of the Waterford River, we wanted to ask you some questions about your experiences you have seen during the winter months.

A little bit about us. We are Northeast Avalon ACAP, a non-profit, non-government environmental organization that works in the St. John's area on different environmental based projects. A current project (ASFC) is based on the theory of re-introducing salmon into the Waterford River! One of the factors we wanted to take into account for this project is potential flooding in the winter time. We wanted to reach out to residents who may have seen or noticed flooding in the winter months perhaps in their backyard or along the river banks.

If you'd like, there are a list of questions below you can answer and email to us (contact information below). The information you provide will be anonymous and your personal information will not be recorded, it would simply give us an idea of occurs in the winter months.

There is no pressure to answer these questions but if you do it would be appreciated!

### Questions

- 1. In the winter months (December-April), have you ever experienced flooding around or on your property?**
- 2. In the winter months (December-April), do you notice a significant change in water levels?**

Again, there is no pressure to answer and submit these questions but if you do your location would be a helpful thing to add or a general idea of where your location is if you do not want to submit your address. The information collected and recorded will contain no personal information (including your address). If you have any questions feel free to reach out to us!

Have a great day!
